To: Operational and Design Plan
Keystone Sanitation Company
Landfill
Identification #100001

Dear Mr. Noel:

The Operational and Design Plan for the Keystone Sanitation Company Landfill, submitted in your behalf by Nassau-Hemsley, Incorporated has been reviewed in this office. Our review indicates that additional information is necessary as noted in the accompanying checklist. The items marked "No" on the checklist are either missing from the plan or insufficiently explained in the data which was submitted. All of the items marked "No" must be included in the plan and/or in the written data before final approval of this plan can be given.

The items from the checklist are explained as follows:

Item #2

a. The present and estimated contributory population for the design life-of-the-site. This information must be included in the written data which accompanies the plan.

b. The estimated per capita daily domestic waste in weight and volume. This information is given in the module in weight only. The per capita daily volume must also be given.

Item #7

The required cartway width for two-way traffic to the site and unloading area is 22 feet. The written data states that the road to the unloading area is only 14 feet in width. A statement should be included in the data to show that turn-outs have been provided to facilitate traffic flow.

Item #11

The topographic map should include the following information within 1/4 mile of the site.

AR103300

Mr. Kenneth F. Noel

Three copies of all written data, maps, and/or plot plans are to be included with your submission. Material submitted originally will be held in our office pending submission of the additional information. At that time our review will be completed.

If you have any questions concerning any of the above, do not hesitate to contact me.

Very truly yours,

Edward R. Simmons
Solid Waste Coordinator
